One of the biggest concerns for me as a video editor (not to mention a photographer) is the CMYK workflow. Adobe has rolled out some impressive improvements to the CMYK-to-RGB process that make a world of difference for me. The app is my daily driver when it comes to photography, and I can't wait to get my hands on Adobe's new and improved professional darkroom. With a promising future, it encourages anyone thinking about upgrading to Photoshop to take a chance. If you're a Creative Cloud subscriber and get a phone or email prompt on your phone, you'll know there's an update ready for you. This requires a computer with relatively recent specifications to keep the processor from spinning out. The newer the computer, the better suited it is for running Photoshop in the Performance mode. Adobe Camera Raw is great for raw photography. On the right side of the interface, you will see a sign that says "Camera Raw". This is where you find features within the program that help you take great photos. There are many popular options to help you crop, straighten, and adjust images. This is a great component for the program. I think that Lightroom 5 expands on this component. I'm curious what the developer thinks about Camera Raw. It's obvious from just getting familiar with the interface that this new version is an extended iteration on Lightroom 4. With the addition of a small number of features—specifically the new "Develop" menu, where you'll find some helpful developer features—Lightroom 5 is pretty much a straight and simple update to Lightroom 4. But I think there are some features you should know about if you're going to use this new version. I finally decided to buy the software version of Lightroom 5 rather than the upgrade version, because I prefer the consistency of the former. The interface is a little bit different, there's yet more tools for editing/cropping/brightening/contrasting/color-correcting in the Develop menu. It's easier to use, but less familiar to those who have used and/or are comfortable with the less frequently used features in LR4.
