Comments about image 3.867 | 1 Comment | Powered by! The FAQ contains the abbreviations, the meanings, the English translation of each word and the definition of each word. You can also find the references to the software and study or describe a word. If you want to get a dream back, you can also get a day back with the help of astrology. So, why don't you try it? Guidelines define game conventions and terms. They describe what makes for a good rule of the game. You can read up on the draft or check out the guidelines in the FAQ. The present invention relates to a semiconductor laser device and a method of manufacturing the same, in particular, to a semiconductor laser device having a p-type AlGaAs cladding layer and a method of manufacturing the same. A conventional semiconductor laser device is constructed such that a semiconductor laser chip is mounted on a base. The base is constructed with a support portion and a sealing portion surrounding the support portion. The support portion is composed of a frame, a stem, and a radiator board. The base is attached to the stem from the side of the stem. The semiconductor laser chip is mounted on the radiator board. The stem is mounted to the support portion via a holding portion. In this type of conventional semiconductor laser device, a case is not attached to the semiconductor laser chip. Therefore, a stress is not applied to the semiconductor laser chip from the sides of the case. Therefore, it is possible to prevent the semiconductor laser chip from being distorted due to the stress to which it is applied. A semiconductor laser chip having a shorter crystal growth direction is larger in deflection in its crystal growth direction than in the other directions, due to the stress to which the crystal is subjected. By setting the crystal growth direction to one shorter than the other directions, it is possible to prevent the crystal from being subjected to a large stress. Therefore, it is possible to prevent the distortion of the semiconductor laser chip. However, the semiconductor laser chip having the shorter crystal growth direction is larger in the degree of its thermal deformation than the semiconductor laser chip having the longer crystal growth direction. Therefore, it is difficult to suppress the distortion of the semiconductor laser chip. So I was playing on my couch with a game of League of Legends (Team Gex) and a lot of the other people in the house were watching The Great British Bake
